

1 Proteins

1.1 ScoreMD

Here we show the TICA plots and the energy of the computed protein trajectories for the fast folding proteins Chignolin and BBA

Figure 1: Projection on the first 2 TIC coordinates (left) and energy computed as logarithm of the probability for a folding trajectory of the protein Chignolin

Figure 2: Projection on the first 2 TIC coordinates (left) and energy computed as logarithm of the probability for a folding trajectory of the protein BBA

2 Likelihood Histograms

Figure 3: Histogram of the likelihoods of the images for strings obtained using the different methods compared to the histogram of the likelihood of the validation set of ImagNet

3 Dependence on the time scheduling for the finite temperature method

In the next we computed different strings with the method at finite temperature. For the intensity of the finite temperature algorithm with the interpolant time we had $\gamma(t) = 15 \frac{6(t_{final}-t)(t-t_{init})}{(t_{final}-t_{init})^3} \mathbb{1}_{\{t \in [t_{init}, t_{final}]\}}$

Figure 4: Images on the principal string for different values of t_{init}

Figure 5: Images on different walkers for different values of t_{init}
